

Certification Platform

Certification Platform

The ideal instrument to meet organizers and participants needs in residential events, because it enables the management of **participants certification release** and the automated calculation of **European training credits** according to EACCME 2018 directives.

Modular

The online platform is modular and can be integrated into **any residential event**: suitable for **medical-scientific events** for EACCME and EBAC compatibility, but can also be used for the management of the online attendance certificate only.

UEMS Credits

The platform automatically calculates, based on the actual presence and according to the parameters laid down by the UEMS regulations, the number of actual credits to be assigned to each participant.

Participant's Area

At the end of the event the participant will have a personal area to complete the **EACCME Participant's Evaluation Form** and the possible **Customer Satisfaction Survey**. After successfully completing the documentation, the certificate of participation or the certification of credits acquired according to UEMS may be downloaded.

Customization

The customization of the online platform with the colours and logo of the congress allows the integration of this tool inside the **website** or the official **APP** of the event. It is also possible to associate evaluation questionnaires and attestation of presence on customized forms accordingly to the graphic line of the event.

Access Control

In order to guarantee the highest level of efficiency, the Platform is **integrated** into the TC Group computerized **access control system**. In fact, the service allows **real-time synchronization** of entry and exit data when the trainee passes and the automatic calculation of credits according to current standards. Alternatively, attendance can be recorded by the Client and the relative data transmitted "manually" to the Platform system.
